

# IDAV Report

---

Ken Joy  
Director , Institute for Data Analysis and Visualization  
Computer Science Department  
University of California, Davis

# Participants

---

- Faculty

- Ken Joy, John Owens, Bernd Hamann, Nina Amenta, Nelson Max, Michael Neff

- Researchers/Adjuncts

- Hank Childs, Oliver Kreylos, Hans Hagen, Owen Carmichael

- Postdocs/Graduate Students

- 6 postdocs, 40 graduate students.

Christoph Garth moves to the Technical University of Kaiserslautern, July 2011

# Institutes/Centers

- Institute for Data Analysis and Visualization
- Institute for Ultrascale Visualization
- Visualization and Analytics Center for Enabling Technologies (VACET)
- KeckCaves (Visualization in the Geosciences)

# Streamlines and Stream Surfaces

---

# Time and Streak Surfaces

# Vortex Breakdown Bubble

# Non-Photorealistic Rendering

Duplicating the Dahlman Images

IEEE Visualization 2010

# Non-Photorealistic Rendering

---

A path surface is formed by dense particle trajectories.

# New Data Structures for Flow Visualization

IEEE Visualization's Best "Imp" Paper

# Running on the GPU

---

# Streamlines and large scale parallelism

- "Scalable Computation of Streamlines on Very Large Datasets", in "SC '09"

- Using Hybrid Parallelism
  - In TVCG -- Coming

# Applications to Flow-Sensitive MRI

Accepted for IEEE TVCG

# Using FTLE to segment flow

Velocity Map

FTLE Map

- Using finite-time Lyapunov exponent methods

# Improving computation time for FTLE methods

# Query-Driven Visualization

Using a combination of Query-Driven Methods and Uncertainty

March, IEEE TVCG

General Idea: Treat large-scale data like databases, and use fuzzy queries

# Embedded Boundary/Material Interfaces

Cross-sectional "Sink" (Composite/ABEC). The sink is represented by volume fractions in a uniform grid, and

# Embedded Boundary/Material Interfaces

# New Material Interface Methods

# Material Interface Methods

Linear-like approximations

New Approximations

# Material Interface Methods

---

# How it Works!

Looks like an isosurface problem????

But we must determine the isovalue so that the volume fractions match

We do this discretely!

# Possibilities

---

Gives a much greater variety of possibilities

Better capturing fine detail!

# Multi-Material Works Also

---

Three-Material Example

# Better Reproduces Fine Detail

Elongated Bubble

Three-Material Example

# Passes the Hank Test!

---

## □ Little Geometry

- Yep. Actually geometry-less is possible.

## □ Accurate

- Yep, within a chosen error bound. Captures fine detail better.

## □ Fast, Parallelizable

- All calculations local -- within a one-ring of a cell

## □ Continuous

- No! But close!

## □ Multi-Material Works

- Yep

# Other Activities

---

- Uncertainty Quantification (PNNL, just started)
- Aerial Surveillance (LLNL)
- Visualization of Function Fields

# Summary of Activities

---

- Visualization of Flow (LBNL, ORNL, LANL, ParaView Team)
- Large-scale visualization methods (LBNL, VisIt Team)
- Material Interface Reconstruction (LLNL, LBNL, LANL)
- Query-driven Visualization (LBNL, PNNL)
- Large-scale methods for unstructured meshes (LBNL, new)
- Uncertainty Quantification (PNNL, just started)
- Aerial Surveillance (LLNL)

# Thank You!

---
